1 * Edison Xiao

Houdini FX Artist / CG Artist

Edison Xiao is a Houdini FX artist focused on procedural motion, product-driven visual effects, and simulation-based design.

His work centers on product-oriented FX shots, including fabric motion, material reveals, woven structures, fluid systems, particle fields, and abstract procedural visuals. Beyond shot production, he also contributes to FX workflow organization, reusable setup development, and production efficiency across design and CG teams.

His approach combines visual sensitivity with technical problem-solving: building controllable systems first, then shaping them into clean, art-directed motion for commercial films.
